

What is claimed is:

1. A wearable computer system for use in testing and diagnostic applications, comprising:

a probe;

a display;

an audio communication device;

a computer adapted to:

(a) receive data from said probe,

(b) exchange data with said display,

(c) exchange data with said audio communication device, and

(d) exchange data by wireless communication;

a battery to supply power to said display and said computer;

a harness for supporting said probe, said display, said computer, and said battery from the body of a user.

2. The system as recited in claim 1, further comprising:

a camera; and wherein

(a) said computer is adapted to receive data from said camera,

(b) said battery is used to supply power to said camera, and

(c) said harness is used for supporting said camera from the body of the user.
